

Personal Tour Guide With Augmented Reality

Tourism provides a means to share culture and tradition among various races without any constraints or regional boundaries. It also contributes a major part to a country's economic wealth. One of the issues in this sector is lack of effective communication where language differences are a major issue. Our application is meant to bridge this barrier and make tourism more effective for both the parties. Our application acts as a **virtual guide** for the visitor from start to end. **Augmented Reality** feature implemented in the app guides the tourist with ease. It provides suggestions of tourist places based on the user's preference which are time to spend, his/her interests, budget and destination. Multi-Language recognition. It provides **Optical Character Recognition** for the easy comprehension of colloquial languages.

Features

- * Android Application
- * Augmented Reality
- * Optical Character Recognition

Group No: 04
